PROFESSIONAL SUMMARY

Computer Science student majoring in Networking and Security with a strong foundation in backend development, system security and full-stack web development. Experienced in building cybersecurity research tools, deployable IoT honeypots, and data-driven applications with foundational knowledge in Web3 and decentralized architectures. Combines technical depth with hands-on experience across hackathons and academic projects, demonstrating initiative, problem-solving, and cross-disciplinary collaboration. Seeking a Software Engineering or Network Security internship (Available starting from June for 16 weeks) to apply analytical skills to impactful, real-world solutions.

TECHNICAL PROJECTS

Lightweight IoT Honeypot System *Ongoing*

Final Year Project | Python, Flask, Nginx, SQLite, SQLAlchemy, JavaScript, Tailwind CSS, Chart.js, Leaflet.js

- Build an IoT honeypot mimicking routers and IP cameras to capture, log and classify real-world attack traffic for cybersecurity research.
- Optimized system architecture to be lightweight and accessible to ensure stable execution on resource-constrained environments
- Developed an automated classification engine that maps attack vectors (e.g., brute force, SQL injection) directly to the MITRE ATT&CK framework.
- Built a real-time analytics dashboard using JavaScript and Leaflet.js to visualize global attack origins and threat statistics.
- Integrated an SMTP email alert system and designed an interactive practice module for students to safely simulate offensive and defensive techniques.

Cybersecurity Practice & CTF Write-ups *Ongoing*

Personal Repository | picoCTF, PortSwigger Web Academy | Burp Suite, Kali Linux, Python

- Maintaining a structured write-up repository documenting solutions across web exploitation, cryptography, and binary challenges on picoCTF.
- Practising real-world web vulnerabilities (SQLi, XSS, SSRF, auth bypasses) using Burp Suite on PortSwigger Web Academy labs.

Cryptocurrency Trading Strategy Backtester *2024*

Side Project | Python, Pandas, NumPy, Matplotlib, Tkinter, CCXT, yfinance

- Developed a Python-based algorithmic backtesting engine to evaluate financial trading strategies against historical market data.
- Built an automated data collection pipeline using CCXT and yfinance APIs to retrieve and process 8,600+ OHLCV datapoints across multiple exchanges.
- Designed an interactive Tkinter GUI for dynamic parameter optimization and real-time visualization of performance metrics (Sharpe ratio, profitability, drawdown).

EDUCATION

INTI International University *2023 – Present*

Bachelor of Computer Science (Hons), Networking and Security *CGPA: 3.52*

SKILLS

- **Programming Languages:** C++, Java, JavaScript (Node.js), Python, PHP, SQL, Bash, HTML/CSS
- **Libraries & Frameworks:** Flask, REST API Development, SQLAlchemy, Tailwind CSS, Chart.js, Leaflet.js, Pandas, NumPy, Matplotlib, Tkinter
- **Tools:** Git, GitHub, MySQL, SQLite, VMware, Cisco Packet Tracer, Wireshark, Nginx, Linux CLI (Kali Linux, Ubuntu)
- **Soft Skills:** Leadership, Problem Solving, Communication, Cross-disciplinary Collaboration, Adaptability
- **Languages:** English, Malay, Chinese

CERTIFICATIONS

- CCNA: Switching, Routing and Wireless Essentials
- CCNA: Enterprise Networking, Security and Automation

EXTRACURRICULAR ACTIVITIES & EXPERIENCE

ETHKL 2024 Hackathon *2024*

Explored blockchain-based solutions to prevent rental fraud on the Ethereum network; gained exposure to smart contract concepts and decentralized architecture.

INTI Tech Club Member *2026*

Participated in industry tour to study the practical deployment of emerging technologies, gaining insights into the future of surveillance systems, cybersecurity, and embedded technologies.

Independent Insurance Agent *2024 – 2025*

Built and managed personal insurance client base targeting international students on campus. Handled marketing, client relationships and policy support, demonstrating business communication skills.
